TOP FEATURES

EFO XS pre-stretch with SMART-Load

Dynamic pre-stretching via our two-roll pre-stretch system with individually driven three-phase motors. Minimal edge pressure thanks to electronic dancer bar position control.

High-bay safe welding

Using impulse welding across the entire film width, the pallet is wrapped without excess film ends while ensuring no contact with the product.

Automatic performance adjustment

The working speed adapts to the actual pallet volume - less wear and tear with longer, trouble-free operation.

STREtch MACHines directly from the manufacturer.

B-VERSION

IMAGE ON THE COVER PAGE

Designed with hold-down device and integrated film clamping and cutting device – enables wrapping to begin and end at the top of the pallet. This allows for a wide variety of wrap patterns.

60

WITH HOLD-DOWN DEVICE

Electrically powered hold-down device for securing unstable or very light products during the wrapping process.

BASIC VARIANT

Reliable load securing at a rate of up to 60 pallets per hour.

60

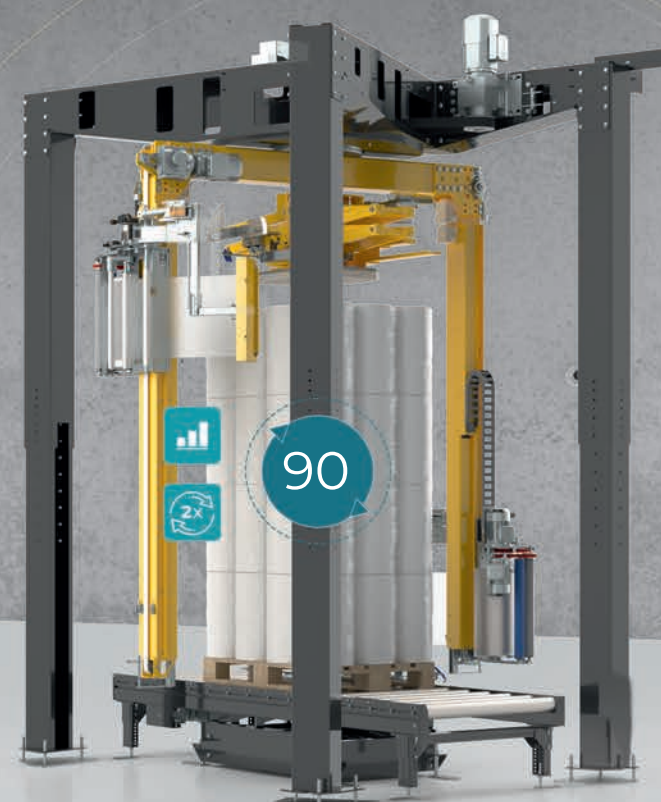

60

DUAL HEAD

Rotating arm-based stretch wrapping system with two stretch heads. A second stretch head significantly increases performance and availability. If one head fails, the remaining head takes over.

90

A 4000^{SERIES}

The mid-range class with
the technology of the big one.
Up to 90 pallets per hour.

UPSTREAM COVER APPLICATOR

For dust and removal protection. Ideal for high-volume production or pallets of varying lengths. Optional handling aid for ergonomic replacement of the cover film without exerting force.

60

INTERNAL COVER APPLICATOR

For rainproof packaging. The weatherproof line achieves a throughput of up to 50 pallets per hour.
